

Task Flow Document

Generate E-FIR

Description:

For a confirmed missing person case, a police officer uses the system to automatically generate a pre-filled Electronic First Information Report (E-FIR) using the tourist's digital ID data.

Primary Roles:

- Police Officer

Secondary Roles:

- System Administrator
- Tourism Official

Task Flow Steps:

1. Receive Missing Person Alert

The police officer is notified of a potential missing tourist case, either through an AI anomaly alert from the system, an escalated panic button activation, or a direct report from the tourist's family or associates.

2. Access Tourist Profile

The officer logs into the VeriTour authority dashboard, uses the search function to find the specific tourist by name or ID, and opens their comprehensive profile page.

3. Initiate E-FIR Generation

From the tourist's profile, the officer locates and clicks the 'Generate E-FIR' button to begin the automated reporting process.

4. Review Pre-filled Data

The system automatically populates the E-FIR form with data from the tourist's Digital ID, including their KYC information, trip itinerary, emergency contacts, and last known location data. The officer reviews this information

for accuracy.

5. Add Case-Specific Details

The officer manually enters additional information required for the report that is not available in the Digital ID, such as the circumstances of the disappearance, witness statements, and initial investigative notes.

6. Submit the E-FIR

After verifying all pre-filled and manually entered information is correct and complete, the officer digitally signs and submits the form through the dashboard.

7. Receive Filing Confirmation

The VeriTour system processes the submission, transmits it to the relevant state police system via a secure API, and displays a success message with a unique E-FIR number and a timestamp for the officer's records.
