

Task Flow Document

Incident Response

Description:

An authorized police officer receives an emergency alert on the dashboard, acknowledges it, views the tourist's complete profile and real-time location, and manages the response workflow.

Primary Roles:

- Police Officer
- Tourist

Secondary Roles:

- Tourism Official
- Family Member
- System Administrator

Task Flow Steps:

1. Tourist Triggers Panic Button

A tourist in distress activates the prominent panic button within the VeriTour mobile application. A 5-second cancellation window is provided to prevent false alarms.

2. System Generates Alert

The VeriTour system receives the distress signal, captures the tourist's live location and profile data, and generates a high-priority incident alert.

3. Officer Receives Dashboard Alert

The nearest police unit receives an audible and visual notification for the new incident on their real-time monitoring dashboard.

4. Officer Acknowledges Incident

An authorized police officer clicks to acknowledge the alert within the target SLA of 60 seconds, taking ownership of the incident and stopping further escalations.

5. View Comprehensive Incident Details

The officer accesses a unified screen displaying the tourist's Digital ID, photo, itinerary, emergency contacts, live location on a map, and an incident timeline.

6. Coordinate On-Ground Response

Based on the available information, the officer dispatches response teams, communicates with relevant parties, and manages the tactical response to the situation.

7. Update Incident Status

The officer updates the status of the incident in the dashboard (e.g., 'Response in Progress', 'Contact Made', 'Situation Resolved') to keep all stakeholders informed.

8. Generate Automated E-FIR

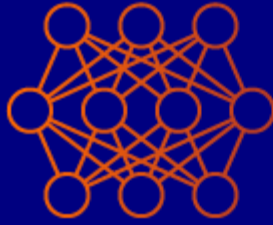

If the incident is determined to be a missing person case, the officer uses the dashboard to automatically generate a pre-filled Electronic First Information Report (E-FIR) using the tourist's data.

9. Resolve and Close Case

Once the emergency is resolved and the tourist is safe, the officer adds final notes and officially closes the incident case in the system, which is then archived for legal and audit purposes.

Weekend hike at the ridge. Fresh air, clearer mind. Anyone knows a good trail near SF?
