

Task Flow Document

System Analytics

Description:

An authorized government or tourism official accesses the analytics module to review historical data, generate reports on incident trends, and monitor key performance indicators.

Primary Roles:

- Tourism Official

Secondary Roles:

- Government Representative
- System Administrator

Task Flow Steps:

1. Log into Authority Dashboard
The Tourism Official securely logs into the VeriTour web-based dashboard using their authorized credentials.
2. Access Analytics Module
From the main dashboard interface, the official navigates to the dedicated 'Analytics & Reporting' section.
3. Select Report Type
The official chooses the type of analysis to perform from available options, such as 'Incident Trend Analysis', 'Tourist Density Heat Maps', or 'System Performance KPIs'.
4. Define Data Filters
The official specifies the parameters to narrow down the data for the report, including date ranges, geographical regions, tourist demographics, or specific incident categories.
5. Generate Visualization or Report

The system processes the request and generates interactive charts, graphs, maps, or data tables based on the selected filters.

6. Analyze Data Insights

The official reviews the generated visualizations to identify trends, patterns, and key performance indicators, gaining insights into tourist safety and system operations.

7. Export and Share Findings

If needed, the official exports the report in a suitable format (e.g., PDF, CSV) or shares a secure link to the dashboard view with other authorized stakeholders, such as government representatives.
