

Task Flow Document

User Management

Description:

A system administrator manages user accounts, roles, and permissions for police, tourism department personnel, and other stakeholders accessing the authority dashboard.

Primary Roles:

- System Administrator

Secondary Roles:

- Police Officer
- Tourism Department Personnel

Task Flow Steps:

1. Access Management Dashboard

The System Administrator securely logs into the VeriTour system and navigates to the 'User Management' or 'Admin' section of the authority dashboard.

2. Initiate User Creation

The administrator selects the option to create a new user account, typically by clicking an 'Add User' or 'Create Account' button.

3. Enter User Details

The administrator fills out a form with the new user's information, such as their full name, official email address, employee ID, and assigned department (e.g., Police, Tourism).

4. Assign User Role

The administrator assigns a predefined role to the user from a list (e.g., 'Police Responder', 'Tourism Official', 'Regional Supervisor'). This role automatically applies a base set of permissions.

5. Configure Specific Permissions

If necessary, the administrator fine-tunes the user's access rights, granting or revoking specific permissions that are not covered by the default role, such as access to high-sensitivity data or E-FIR generation rights.

6. Review and Create Account

The administrator reviews all the entered information and assigned permissions for accuracy before confirming the creation of the account. The system then generates the account and sends an activation email to the new user.

7. Search for Existing User

To modify or deactivate an account, the administrator uses the search or filter function within the user management dashboard to locate the specific user by name, email, or employee ID.

8. Modify User Account

After selecting a user, the administrator can edit their details, change their assigned role, or update their specific permissions. All changes are saved to update the user's profile.

9. Deactivate User Account

If a user no longer requires access, the administrator selects the option to deactivate or disable the account. The system prompts for confirmation before revoking all access rights for that user.
