

Task Flow Document

View Safety-Info

Description:

A tourist uses the mobile app to check their dynamic safety score, view the risk map, and receive real-time notifications when approaching or entering a geo-fenced zone.

Primary Roles:

- Tourist

Secondary Roles:

- Tourism Department Personnel
- System Administrator

Task Flow Steps:

1. Open VeriTour Application

The tourist locates and taps the VeriTour application icon on their smartphone to launch the app.

2. Access Safety Dashboard

From the app's main screen, the tourist navigates to the dedicated 'Safety' or 'Dashboard' section.

3. View Dynamic Safety Score

The tourist observes their current safety score, which is dynamically calculated by the system based on their location, itinerary, and known area sensitivity.

4. Explore Risk Heatmap

The tourist interacts with the integrated map to view color-coded heatmaps that visually represent high-risk or restricted zones in the vicinity.

5. Move towards Geo-fenced Zone

While traveling, the tourist's physical location, tracked by their smartphone's GPS, begins to approach a pre-defined geo-fenced area.

6. Receive Geo-fence Alert

The VeriTour system automatically detects that the tourist is entering or nearing a restricted zone and sends a real-time push notification to their device.

7. Acknowledge Alert Notification

The tourist views the alert, which provides details about the zone they are approaching, and can take appropriate action based on the warning.
